

LEAN AND CLEAN

By combining Lean manufacturing fundamentals with environmental issues, manufacturers can use these two highly complementary concepts to produce positive results.

***Lean** - a systematic approach to identifying and eliminating waste through continuous improvement by flowing the product at the pull of the customer in pursuit of perfection.*

***Clean** - a systematic approach to eliminating waste by optimizing use and selection of resources and technologies while lessening the impact on the environment.*

Why make Clean a part of your Lean methodology?

- Eliminates more wastes and reduces costs
- Strengthens compliance and risk
- Shares environmental improvement with Lean process change
- Removes environmental obstacles to increase sustainability
- Creates competitive advantages in developing environmentally friendly products expected by your customers
